## COVER LETTER

I'm Wayne Mike and I'm a Junior Software Engineer. I love programming and I have committed most of my time to it. I'm fascinated by the power of development. I fancy a working environment where I would contribute by:

- making full use of the platform to think beyond the odds of expectations and out of the box.
- coding passion-driven feature that present the best version of the idea in the form of life.
- applying the best of intelligence towards building solutions that signature the company as no one else but the best.
- coding with excitement and making the client part of the solution they are looking for.
- trying by all means to be the best at being in a team player in a team.
- working towards excellence and design that satisfies the desires of the client.
- making sure I learn something from everyone in the talented team.

I would love to be in a team of intellectuals who are great at what they do, it is only that kind of mentality and nothing less than I'd love to grasp at a workplace.

Last but not least I'm excited about being part of the team that build great products and where I can learn new languages.

Sincerely

**Wayne Mike**

Junior Software Engineer
